

Wine Analysis

SPIRITS BEER & MORE

Topic

We are a team within a startup wine and spirits company that have been tasked with assisting the Operations Team in selecting which wine to increase production on, and determining the association of reviews and descriptors from data scraped from WineEnthusiast.com during the week of November 22nd, 2017. This topic was selected as we all wanted to work with a product or data type that we were either familiar with or would be interested in learning more about

Data

- Points: the number of points WineEnthusiast rated the wine on a scale of 1-100 (through they say they only post reviews for wines that score ≥ 80)
- Title: the title of the wine review, which often contains the vintage if you're interested in extracting that feature
- Variety: the type of grapes used to make the wine (ie Pinot Noir)
- Description: a few sentences from a sommelier describing the wine's taste, smell, look, feel, etc.
- Country: the country that the wine is from
Province: the province or state that the wine is from
Region 1: the wine growing area in a province or state (ie Napa)
Region 2: sometimes there are more specific regions specified within a wine growing area (ie Rutherford inside the Napa Valley), but this value can sometimes be blank
Winery: the winery that made the wine
Designation: the vineyard within the winery where the grapes that made the wine are from
Price: the cost for a bottle of the wine
Taster Name: name of the person who tasted and reviewed the wine
Taster Twitter Handle: Twitter handle for the person who tasted and reviewed the wine

Questions

1. Which wines should we choose to produce more of based on the reviews of our consumers
2. Which winery should we choose to work with based on the variety we select and the reviews provided?
3. What is the average price of wine receiving above average reviews?

Predictions

1. Can we predict if consumers will purchase the type of wine we choose to produce based on their reviews?
2. Can we predict the scores of future wine tastings based on previous ones?
3. Does the description of the wines lead to a higher reviews/points?

Machine Learning

- On the Machine Learning part, we applied the Keras model from Tensorflow. In the first data run, the columns “Description” and “” were removed from the algorithm, while a second run was made including the “Description” column in order to compare values between them to see which model gives more accuracy.
- In order to carry out the ML model applied to the Wine_Analysis dataset, all the columns, except “Designation”, were cleaned, transformed and encoded. Later on, Standard Scaler was applied for normalizing the features, and all data frame were merged into the original.

Wine Selector Website

An additional aspect of this project was to create a website using JavaScript and HTML that allows users to filter through the WineEnthusiast data and select a wine according to their specific tastes. You are able to select some or all of the categories and type whatever you like, and the selector tool will draw from the dataset and show you all or any of the wines that match your search.

Which Wine is Right For You?

Wine Selector Tool

Personalized wine recommendations
we know you'll love

Our wine selector tool is a quick and easy-to-use system that narrows down your perfect pick based on the kinds of flavors you like, your budget, and winery location.

Data about the wines were scraped from articles and reviews from WineEnthusiast magazine during the week of November 22, 2017, so the filter also gives you information about the wine's score, reviewer, and reviewer's Twitter handle.

Use this selector to get wine suggestions specifically catered to your tastes. Or use it to remind you of that delicious wine you recently enjoyed.

Clear Table

Score	Title	Description	Taster Name	Taster Twitter
87	Nicosia 2013 Vulkà Bianco (Etna)	Aromas include tropical fruit, broom, brimstone and dried herb. The palate isn't overly expressive, offering unripened apple, citrus and dried sage alongside brisk acidity.	Kerin O'Keefe	@kerinokeefe
87	Quinta dos Avidagos 2011 Avidagos Red (Douro)	This is ripe and fruity, a wine that is smooth while still structured. Firm tannins are filled out with juicy red berry fruits and freshened with acidity. It's already drinkable, although it will certainly be better from 2016.	Roger Voss	@vossroger
87	Rainstorm 2013 Pinot Gris (Willamette Valley)	Tart and snappy, the flavors of lime flesh and rind dominate. Some green pineapple pokes through, with crisp acidity underscoring the flavors.	Paul Gregutt	@paulgwine
